

Vinith Wade

Hyderabad, Telangana | +91-6301438132 | wadevinith01@gmail.com | linkedin.com/in/vinith-wade | github.com/vinithwade

TECHNICAL SKILLS

- **Programming Languages:** Java (Core Java, Concurrency, Collections), TypeScript, JavaScript, Python, SQL, C, C++
- **Backend & Distributed Systems:** Spring Boot, Apache Kafka, Non-blocking I/O, RESTful APIs, WebSockets, Inngest, Node.js
- **Databases & Storage:** PostgreSQL, Redis, ClickHouse, Supabase, pgvector, Row-Level Security (RLS)
- **Testing & Developer Tooling:** JUnit 5, Mockito, Testcontainers, Docker, Git, GitHub Copilot, Claude Code, AWS (EC2, S3)
- **Frontend & UI:** React.js, Next.js, Tailwind CSS, Electron, Streamlit

EXPERIENCE

MINDFLOW

Jun 2026 – Jul 2026

Founding Backend Engineer

Hyderabad, India

- Engineered an asynchronous, event-driven desktop processing pipeline coordinating global hotkeys, audio capture, OCR, and accessibility APIs to generate and inject contextual replies into active desktop windows in under **450ms**.
- Designed modular provider interfaces supporting OpenAI, Deepgram, and Anthropic backends with IPC-based state management, schema validation, and retry workflows for reliable asynchronous processing.
- Implemented PostgreSQL and Supabase infrastructure utilizing **Row-Level Security (RLS)**, atomic credit deduction transactions, and HMAC webhook verification with **idempotent processing** to eliminate double-spend errors.
- Integrated AI developer assistants (**Claude Code**, **GitHub Copilot**) into the engineering workflow, cutting test-writing overhead by **40%** and identifying edge-case concurrency race conditions prior to staging deployments.

ZIPPI

2025 – 2026

Backend Engineer

Hyderabad, India

- Architected a distributed multi-source document ingestion pipeline for PDFs, audio, and web pages with **Inngest-orchestrated retries**, text chunking, and batch embedding generations.
- Built a source-grounded RAG retrieval service using **pgvector** cosine similarity over tokenized chunks, enforcing token budget constraints and precise source citations to eliminate model hallucinations.
- Enforced multi-tenant isolation via signed upload URLs, PostgreSQL RLS policies, automated usage metering, and Stripe webhook synchronization across **100%** of active subscriptions.

PROJECTS

Real-Time Compliance & Transaction Monitoring Pipeline | *Java 21, Apache Kafka, Spring Boot, Redis, ClickHouse, Docker*

- Built a high-throughput event processing engine in **Java 21** capable of handling financial tick and transaction streams with sub-**5ms** ingestion latency.
- Implemented lock-free sliding-window aggregations using `java.util.concurrent.atomic` arrays and circular ring buffers to compute real-time rolling trade volumes and flag statistical anomalies.
- Configured key-based partitioning on **Kafka topics** with batching and lz4 compression, ensuring strict in-order per-account processing under simulated backpressure.
- Designed a dual-tier storage strategy using **Redis** for sub-millisecond hot metric lookups and **ClickHouse MergeTree** tables for high-compression historical analytics.
- Wrote automated integration tests with **JUnit 5** and **Testcontainers** to verify fault tolerance, partition rebalancing, and zero data loss on broker restarts.

ICU Sepsis Prediction System | *Python, Scikit-learn, XGBoost, Streamlit, Pandas*

- Engineered a clinical screening pipeline combining GRU/LSTM temporal representations with an XGBoost classifier, achieving **78% accuracy** and a **0.85 ROC-AUC** across 16 physiological parameters.
- Addressed extreme medical dataset imbalance across 30,000 records using SMOTE oversampling, improving early clinical sepsis recall from **55% to 75%**.
- Deployed a real-time Streamlit dashboard providing on-demand risk stratification alongside dynamic feature-importance attribution for clinical explainability.

PUBLICATIONS & ACHIEVEMENTS

- **Research Publication:** “Early and Interpretable Prediction of Sepsis In ICU Using Hybrid GRU/LSTM Temporal Embeddings and XGBoost” – *IC-SIT International Conference* (2026)
- **Certifications:** Google Cloud Generative AI & Large Language Models | HackerRank Certified (Python & Problem Solving)
- **Problem Solving:** 237+ LeetCode problems solved | Smart India Hackathon Participant | Selected for E-Cell Leadership (Top 25)

EDUCATION

Vardhaman College of Engineering

B.Tech in Information Technology

2023 – 2027

Hyderabad, India
