EXPERIENCE

MINDFLOW

Jun 2026 – Jul 2026

Founder / Founding Backend Engineer

Hyderabad, India

- Built the backend pipeline for a desktop AI assistant that captures audio, OCR, and screen context, generates responses, and inserts them into the active application with response times under 450ms.
- Developed the backend around OpenAI, Deepgram, and Anthropic APIs, with Supabase/PostgreSQL for user data, credit tracking, RLS-based access control, and secure webhook handling.

ZIPPP

2025 – 2026

Founder / Backend Engineer

Hyderabad, India

- Built a document ingestion pipeline that processes PDFs, audio, and web pages, splits content into chunks, generates embeddings, and stores them for semantic search.
- Developed the RAG backend using pgvector for retrieval, with source citations, multi-user data isolation, usage tracking, signed uploads, and Stripe subscription handling.

Corizo Edutech Private Limited

Dec 2025 – Feb 2026

Data Science Intern

Remote

- Worked on data preprocessing, exploratory data analysis, and machine learning model development using Python, Pandas, NumPy, Matplotlib, and Scikit-learn on real-world datasets.

PUBLICATIONS

- **Research Publication:** “Early and Interpretable Prediction of Sepsis In ICU Using Hybrid GRU/LSTM Temporal Embeddings and XGBoost” – *IC-SIT International Conference (2026)*

PROJECTS

ICU Sepsis Prediction System | *Python, Scikit-learn, XGBoost, Streamlit, Pandas*

[Link]

- Developed a clinical screening pipeline combining GRU/LSTM temporal representations with an XGBoost classifier, achieving **78% accuracy** and a **0.85 ROC-AUC** across 16 physiological parameters.
- Addressed severe class imbalance across 30,000 medical records using SMOTE, improving early sepsis recall from **55% to 75%**.
- Built a Streamlit dashboard for real-time risk prediction and feature-importance analysis to make model outputs easier to interpret.

OneSearch | *Next.js, FastAPI, Gemini Vision, CLIP, Qdrant*

[Link]

- Built a visual fashion search system that decomposes uploaded outfit images into garment attributes such as category, cut, color, fabric, and style using Gemini Vision.
- Generated CLIP embeddings and used Qdrant vector search with category, stock, and price filters, supported by a D2C catalog pipeline that crawls, deduplicates, embeds, and indexes fashion products.

Dekho | *React Native, TypeScript, Expo, Zustand, TMDB API*

[Link]

- Built a swipe-based movie discovery app that learns from likes, skips, genre preferences, language choices, and trailer views to rank upcoming recommendations.
- Integrated TMDB APIs for trending and recent movies with Indian OTT availability, while implementing persistent watchlists, viewed-title history, undoable swipes, and background recommendation prefetching.

CipherMail | *Python, Flask, PGP, SQLite, HTML, CSS*

[Link]

- Built a secure messaging application using PGP with **2048-bit RSA** key pairs, public-key encryption, and digital signatures for authenticated message exchange.
- Implemented message encryption and signature verification using **AES-256** and **SHA-256**, storing only encrypted message bodies in SQLite and decrypting them with the recipient’s passphrase-protected private key.

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, C++, Java, SQL
- **Frameworks & APIs:** Next.js, Node.js, FastAPI, Flask, React Native, REST APIs
- **Databases & Cloud:** PostgreSQL, MongoDB, Redis, Qdrant, Supabase, AWS, GCP
- **Tools & ML:** Docker, Git, GitHub, Postman, Scikit-learn, XGBoost, Pandas

EDUCATION

Vardhaman College of Engineering

2023 – 2027

B.Tech in Information Technology | CGPA : 7.5

Hyderabad, India

ACHIEVEMENTS

- Google Cloud Generative AI & Large Language Models | HackerRank Certified (Python & Problem Solving) | Smart India Hackathon
- Got Selected in (Top 25) E-Cell Leadership
